SUMMARY

Motivated computer science graduate and current MSc Artificial Intelligence student with strong foundations in software engineering, algorithms, and data analytics, backed by a first-class BSc in Computer Science (Software Engineering) from the University of Hertfordshire. Experienced in building scalable, secure, and data-driven applications through hackathons, high-performance computing projects, and full-stack development work, with hands-on skills in Python, SQL, Java, JavaScript, cloud platforms, and modern analytics tools. Certified in Azure AI Fundamentals, IBM MQ Developer Essentials, and data science and cloud technologies, bringing a blend of AI, automation, and business intelligence expertise to solve real-world problems.

TECHNICAL SKILLS

Programming Languages: Python, SQL, Java, HTML, CSS, JavaScript, PostgreSQL, Salesforce

Tools/Technologies: Pandas, NumPy, Matplotlib, Seaborn, Tableau, Power BI, Git, GitHub, Excel

EDUCATION

Master of Science in Artificial Intelligence Graduating 2026

Queen Mary University of London, London, United Kingdom

Relevant coursework: Machine Learning, Artificial Intelligence, Natural Language Processing, Reinforcement Learning

Bachelor of Science with Honors in Computer Science – First Class Honors Graduated 2025

University of Hertfordshire, Hatfield, United Kingdom

Relevant coursework: Data Structures and Algorithms, Software Engineering, Data Analytics, Web Development

WORK EXPERIENCE & ACHIEVEMENTS

University of Hertfordshire : Student Representative 09/2023 – 05/2024

- Used advanced Excel functions to analyze and create an easy-to-understand data visualization dashboard to interpret large student datasets, providing clear insights into institutional performance and student feedback.
- Collaborated with both students and faculty to produce detailed reports that led to improvements in institutional processes and resolved key challenges.

JP Morgan Data for Good Hackathon 10/2025

- Cleaned and structured datasets for Non-Profit “Article 1” using Python (Pandas, NumPy) to ensure accuracy and consistency.
- Analyzed engagement and text data to identify trends in donor behavior and program performance.
- Recommended solutions including a standardized text-matching algorithm, a robust engagement score formula, and bucket-based grouping for similarity comparison, presented to JP Morgan judges.

CIUK Cluster Challenge 2025 – Computing Insight UK Conference 12/2025

- Built and operated a high-performance computing (HPC) cluster service using Alces Flight/GHPC with Slurm scheduling, KVM virtualization, and diskless Rocky Linux compute nodes.
- Configured an AWS-hosted monitoring and observability stack (Prometheus, Grafana, Loki, Promtail, Alertmanager, Node Exporter) to track CPU, network traffic, and failed SSH logins across the cluster.

GreatUni Hackathon, University of Manchester 11/2023

- Won first place for developing "Kredia", a fully functional website prototype for Capital One.
- Developed both front-end and back-end components using HTML, CSS, JavaScript, and React.js.

Computer Science Chapter Member Recognition 2023-2024

- Developed skills in teamwork, leadership, and effective communication, recognized by faculty and peers.

PROJECTS

Snatcher: Mobile Security Web-Based Application

- Developed a cross-platform web and mobile security app using Flutter and Supabase, enabling real-time device tracking, geofencing, and emergency alerts.
- Implemented secure authentication, live location tracking, and IMEI blacklist checks, ensuring comprehensive device and data protection.
